

Claims

1. A gas bag module, comprising  
  
a gas generator (16) and  
  
a generator carrier (12), to which said gas generator (16) is fastened and via which  
5 said gas generator (16) can be fastened directly or indirectly to a vehicle steering  
wheel,  
  
characterized in that said generator carrier (12) consists at least partially of a  
multiple-component plastic (30, 32), said components defining different layers of  
said carrier (12).
- 10 2. The gas bag module according to Claim 1, characterized in that said  
generator carrier (12) has a base section (19) with detent elements (20) formed  
thereon, by means of which detent elements said generator carrier (12) can be  
fastened on a steering wheel side.
3. The gas bag module according to Claim 2, characterized in that said detent  
15 elements (20) consist at least partially of a multiple-component plastic (30, 32).
4. The gas bag module according to Claim 1, characterized in that said  
multiple-component plastic consists of a carrier material (30) and a coating (32).
5. The gas bag module according to Claim 1, characterized in that said  
generator carrier (12) has a cup-shaped construction with a depression (14) in  
20 which said gas generator (16) is arranged.
6. The gas bag module according to Claim 5, characterized in that a covering  
cap (26) is provided, which can be inserted into said depression (14), and that said  
depression (14) is constructed such that said covering cap (26) closes said  
generator carrier externally.

7. The gas bag module according to Claim 5, characterized in that said depression (14) has an edge (22) with at least one section (24) formed thereon so as to project laterally.

8. The gas bag module according to Claim 7, characterized in that said  
5 projecting section (24) consists of a multiple-component plastic (30, 32).

9. A vehicle steering wheel with a gas bag module comprising a gas generator (16) and a generator carrier (12), to which said gas generator (16) is fastened and via which said gas generator (16) can be fastened directly or indirectly to a vehicle steering wheel, said generator carrier (12) consisting at least  
10 partially of a multiple-component plastic (30, 32), said components defining different layers, said generator carrier (12) having a cup-shaped construction with a depression (14) in which said gas generator (16) is arranged, and at least one projecting section (24) being formed on an edge of said recess (14), characterized in that said projecting section (24) forms a part of a surface of said steering wheel  
15 (100) which is visible from the exterior.

10. The vehicle steering wheel according to Claim 9, characterized in that said gas bag module is mounted so as to be movable in axial direction.
